asus h81m-plus ozmosisi boot abfs

Beitrag von „kuckkuck“ vom 6. Januar 2018, 13:37

Could you please explain what exactly the problem is? If the boot doesn't work completely, send a picture of the last few Verbose lines.

And why are there so many APFS files on your EFI Partition? APFS is supposed to be in your BIOS or loaded via bcfg but nothing else...

Just curious: Which theme are you using? Could you attach it? 😊
