Hello all,

I have

1. Manufacturer: Gigabyte
2. Model: GA-B85M-D3H-A
3. Chipset: B85M.
4. Bios version: F3a
5. Link [http://download.gigabyte.eu/Fi...ios\\_ga-b85m-d3h-a\\_f3a.zip](http://download.gigabyte.eu/Fi...ios_ga-b85m-d3h-a_f3a.zip)

it is strange but this motherboard has 4.2 MB bios. (I saw the same motherboard here without A)

Is it possible for her?
