I have 2 motherboards MSI:
The first one is the MSI Nightblade mI (for this I have your Ozmosis, but there is no option to set the CPU needed for Sierra installation and therefore restarts ... The CPU is i5-4460S and GK is the MSI geforce GTX 970) and the other is MSI H81I, he also needed Ozmosis for you, but I do not like Ozmosis but he does not like you (he does not have a menu and does not boot ... the Sierra installation will run but he can not run)
