[Gelöst] Ozmosis GA Z77P-D3 - Problems encountered

Beitrag von „visin“ vom 11. Januar 2018, 09:47

Thanks, but still there is a problem.

I just reinstalled the macos, the installation process is very smooth, but when I first reboot the system when the problem came, Gigabyte logo appeared after the black screen, without any hint, F2, F12, End have no effect, I can only use Double bios to restore the main bios.

I suspect it is apfs problem, you turn off the apfs code output, so there will be problems?

How to solve these?
