Erledigt **Hp 8470p Fixes!**

Beitrag von „anonymous_writer" vom 15. Januar 2018, 20:35

Hello pole,

Welcome to our Forum.

But I have bad news for you. The Amd 7570m is not supported under OSX.
You have to define Custom EDID for this graphic card. This is possible with Linux, but not easy.

Next you have to load VBios for this graphic card according to your Ventor and Device ID .
https://github.com/dch/mbp2011...002.6760.from_ioreg_0.rom
This last I think you will not found.

Unfortunately, on this laptop the HD4000 is disabled. 😭
