Hp 8470p Fixes!

Beitrag von „pole“ vom 16. Januar 2018, 12:48

I installed the AppleALC.kext successfully, but now there isn't hdmi audio.(VoodooHDA there was.)

I forgot another issue. When I first booted the OS drive my screen wanted to display 30 bits and the color flickered.

I resolved the problem with ResXtreme app and changed to 24-bit, but when I was connecting to the TV, the problem came again.

The Card Reader doesn't work, first it worked completely.

I attached the Other folder and pics.

Do i need to install something to / Library / Extensions.? -or it's okay.

Btw: did you try the ICC profile?
