Probiert mal in Clover unter Boot-Flags: slide=128

edit:

Ach ja,..

Bios checken:

- Most up-to-date UEFI BIOS firmware (check your motherboard vendor website).
- Fast Boot and Hardware Fast Boot disabled in BIOS if present.
- Above 4G Decoding or similar enabled in BIOS if present.
- VT-d disabled in BIOS if present (you could also drop ACPI DMAR table with a bootloader).
- CFG Lock (MSR 0xE2 write protection) disabled in BIOS if present (consider [patching it](#) otherwise if you have enough skills).
- CSM disabled in BIOS if present (you may need to flash GOP ROM on NVIDIA 6xx/AMD 2xx or older, relevant material: [#1](#), [#2](#), [#3](#)).
- EHCI/XHCI Hand-off enabled in BIOS *only* if boot stalls unless USB devices are disconnected.
- VT-x, Hyper Threading, Execute Disable Bit enabled in BIOS if present.
