Ozmosis i7-3770K Gigabyte GA-Z77-D3H

Beitrag von „idanchen“ vom 11. Februar 2018, 06:58

Hello.

1. This bundle (i7-3770K + Gigabyte GA-Z77-D3H) will work well for bios ozmosis? Or do I need a processor without "K" (i7 3770)?

2. On the Internet on the hakintosh all use the GA-Z77-DS3H motherboard. The motherboard GA-Z77-D3H is not worse? Will they work the same (natively) in the operating system mac os?

Thank you.
