`Erledigt` **Will Only Boot when I target thru the Bios**

Beitrag von „Si Vis Pacem" vom 7. März 2018, 22:41

High Sierra on SSD equates to APFS in almost all cases.

To display an APFS macOS Partition in the Ozmosis GUI you need to enter EDK-Shell and add it.

The Ozmosis bios you are using has the APFS-efi integrated and thus the macOS partition gets recognized and is selectable.
