v1.2.5

- Add basic automatic IGPU model detection if it is not set
- Add IGPU device id correction (correct device-id should be set via device properties or ACPI)
- Add basic digital audio correction on (HDAU rename on Haswell and layout-id/hda-gfx where needed)
- Add GFX0 -> IGPU automatic rename
- Add MEI/HECI -> IMEI automatic rename
- Add IMEI device id automatic correction on Sandy Bridge and Ivy Bridge
- Add basic automatic AAPL,ig-platform-id injection (defaults to connector-less when AMD/NVIDIA is found)
- Add GuC microcode loading on SKL (9.33) and KBL (9.39) in 10.13 (enabled via igxfw=1 boot-arg)
- Add igfxframe=frame boot-arg for framebuffer id injection in testing cases
- Fix booting without -disablegfxfirmware boot argument on KBL GPUs
- Fix compatibility with connector-less frames
- Minor performance improvements
