> well yeah, i have coil whine in windows under heavy load, thats totaly fine, its not nearly as loud as in macOS. but in macOS, the gpu is everytime under full load, just for milliseconds. but as i said, latest betas fixes the noise

10.13.4 is out of the beta in few days, so lets hope it fixes our gpu problems.

if you feel annoyed by coil whine maybe you can exchange your card if it is still in warranty. I succeeded with exchanging mine, but the new one I got also has coil whine while under full load.
