CPU taktet nur zwischen 800/2000/2500

Beitrag von „Peter_Pan“ vom 26. März 2018, 22:03

Wäre eine Idee 👍

Ich habe mir das Log vom Intel Power Gadget nochmal angesehen.

Und ab und zu taucht dieser Eintrag auf.

Either 1) the computer was put to sleep or 2) the app was app nap'd.

Wären das Logfile erstellt wurde, habe ich ein Video über Youtube abgespielt.

Code

Alles anzeigen

Kann damit jemand etwas anfangen?

Und erst wenn ich in der Config die Option PluginType=1 setze inkl SSDT Taktet die CPU auf 1400mhz.

Nehme ich den Eintrag weg verschwindet der Takt 1400 und die CPU Taktet nur zwischen 800 und 2000 😊
