

# NvidiaGraphicsFixup

Beitrag von „Noir0SX“ vom 30. März 2018, 12:31

## v.1.2.4

- Added `ngfxgl=1` boot argument (and `disable-metal` property) to disable Metal support
- Added `ngfxcompat=1` boot argument (and `force-compat` property) to ignore compatibility check in `NVDAStartupWeb`
  
- In order to boot with `ngfxgl=1` on 10.13.x you may need to set the defaults:

### Code

1. `sudo defaults write /Library/Preferences/com.apple.CoreDisplay useMetal -boolean no`
2. `sudo defaults write /Library/Preferences/com.apple.CoreDisplay useIOP -boolean no`
