Hp 8470p Fixes!

Beitrag von „christoforosgr“ vom 31. März 2018, 22:57

[Zitat von pole](#)

My Clover version is 4411 and all kexts are up to date.
(Update with Kext Updater By H-Forum - Respect to Sascha_77!)

Many thanks for sharing your EFI partition! Just tested, and I can successfully do a clean install and reach the initial setup screens!

I am a newcomer to this forum and end up here after a couple of hours of trial-and-error searching. A couple of years ago I had a 8470p with HD4000 and was using PBI. After a (short) break in hackintoshing (found an 2010 27 iMac at very good price), I am revisiting the hackintosh scene with a 8470p with AMD graphics. I dare to say that laptops with AMD graphics are not very well documented, unless of course you have time.

Again, many thanks for sharing your EFI and letting others (me included) to jumpstart straight to OS, instead of spending a good amount of time trying to get to the installer.
