Hp 8470p Fixes!

Beitrag von „pole“ vom 6. April 2018, 13:20

It is because of the screen default scheme/prefer/force on 10 bit color depth (I don't know why). I use for this the ResXtreme app and switch to 8bit. Each time when you connect a new display this procedure is necessary and maybe a restart. I forgot this problem. :)

Hdmi/Displayport Audio is missing by the wrong connector path, this is not for Eby fakeID (like Dashimaki FID), I didn't have time to fix it.
