

# NvidiaGraphicsFixup

Beitrag von „Noir0SX“ vom 8. April 2018, 11:01

Jetzt offizielles Release

## v1.2.5

- Hardened solved symbol verification to avoid panics with broken kext cache
- Added a workaround to interface lags in 10.13 ( add ngfxsubmit=0 boot-argument to disable)
- Fixed improperly working forced driver compatibility from 1.2.4

With this change you may not need to disable Metal support. Make sure to restore CoreDisplay preferences:

## Code

1. `sudo defaults delete /Library/Preferences/com.apple.CoreDisplay useMetal`
2. `sudo defaults delete /Library/Preferences/com.apple.CoreDisplay useIOP`
