Sierra 10.12.3 auf HP ProBook 6470b

Beitrag von „griven" vom 14. April 2018, 23:41

According to it's Data sheet the 6470b has a IDT92HD87 codec which should work nicely with AppleALC and native AppleHDA. Please remove voodooHDA and any HDADisablers you may have installed also make sure you use an untouched and vanilla version of AppleHDA.kext. To activate audio via AppleALC place AppleALC an Lilu.kext in /Efi/Clover/Kexts/Other and edit your config.plist. In the ACPI Section tick "FixHDA" and in the devices Section enter "3" as Layout ID under Audio. If 3 does not work for you you may also try 12 or 13 as Layout ID's since your codec is around in different flavours...
