I Checked the Thread and found this to get the HD7670M working in HS.

Greetings Mocca55

Hmm, only this? Now I'm using Intel graphics and before I had to patch DSDT/SSDT to disable AMD graphics because I couldn't boot into macOS High Sierra Installer. What should I do to use only AMD graphics (and if it's possible both)?
If you need my EFI I'll attach it.

Thank you!
