Invalid BIOS-Image "Ozmosis Mod für das Z170X-Gaming 7-EU (rev 1.0)"

Beitrag von „Raptortosh“ vom 2. Mai 2018, 13:31

Ok.

Last year I maked tests with Skylake and OZ. It was my H170M-D3H and the I5 6600K. I load all per BCFG. The error was this, when I tried to starte macOS Sierra or Mac OS X El Capitan.

[Zitat von Intel6600](#)

Kernel Extensions in Backtrace:

com.apple.driver.AppleACPIPlatform

dependency: com.apple.iokit.ioACPIFamily

dependency: com.apple.iokit.ioPCIFamily

But I can not make tests again this time.
