Does Oz understand Xeon CPU's and how to make it work?

Beitrag von „griven“ vom 5. Mai 2018, 11:50

[@firefly can fly](#) making a XEON IGPU work is not only a matter of correct IGPlattFormID in defaults. The XEON IGPU is almost the same as Core I IGPU'S but it has it's own device ID which prevents macOS from loading the correct drivers. Alongside to IGPlattFormID 220332035 you'll need FakePCI.kext and FakePCIID_Intel_HD_Graphics.kext and maybe IntelGraphicsFixup.kext as well.
