you might need to remove current bluetooth and wifi kext

here is the solution

cover this kext FakePCIID.kext to your clover

copy all the kext in the s-l-e (folder) to your system system- library- extensions then use kext utility

you also need to enter some lines in kexttopatch in clover

copy the last 5 lines i attached two photos

im on sierra 10.12.6 using the same card on a hp spectre x360

good luck

handoff and airdrop should work as well
