Mac Os High Sierra install

Beitrag von „bbmatias3“ vom 9. Mai 2018, 01:57

there is an error with your zip file it wont unzip. Laptops are a pain. Your going to need to fix charger, battery indicator, brightness. many of these are dsdt fixes. once you installed successfully you can start working on the rest. I would suggest to try to google someone that has the same laptop or similar and boot with their efi file. also smbios is important
