Erledigt Hackintosh Installation

Beitrag von „bbmatias3" vom 10. Mai 2018, 19:10

ill try my best to help you but can you think of anything that lead to that problem?
also have you updated to the latest bios?

the 64 folder is the one i use and currently worknig for me, i didnt have to mess with my graphic settings in bios

also i had a m.2 that was giving me problems. if you can boot with usb installer and install it might be your m.2.

i was able to install in intel m.2 then after a few boots i would get error. i install in regualr hard drive so far its good.

check your [bios settings](#) again
