ATI Mobility Radeon HD5650 auf Acer Aspire 7741G

Beitrag von „DerJKM“ vom 22. Mai 2018, 17:57

I get 26,76 FPS in latest Cinebench. Whatevergreen is not a separate driver, it helps the system to detect the graphics card correctly. Unlike Nvidia, there is no driver from AMD for macOS. Only the drivers from Apple.

BTW, I don't use Whatevergreen on that system anymore. It works just with InjectATI, InjectEDID, LoadVBIOS, PatchVBIOS and the EDID of my built-in screen in my Clover config.plist. There are no graphical lags on my system, only the very slow HDD...
