ATI Mobility Radeon HD5650 auf Acer Aspire 7741G

Beitrag von „DerJKM“ vom 24. Mai 2018, 11:40

No, I have neither turbo boost, nor some patches for speed step. I got this machine as broken, the optical drive sata is completely dead, the hard drive sata produces a lot of write errors on higher speeds, so a ssd is not usable. And is gets very hot, even in idle and also on windows. So, I just did a basic macOS installation with graphics, audio and battery working, and I think I will not spend time on perfecting it.
