Ozmosis cannot boot OSX from APFS

Beitrag von „justrichpower“ vom 31. Mai 2018, 06:30

Hi Griven, thanks for the late xmas present Z77MXD3H_HighSierra_L1c.F7e .

this is my first ozmo experience. is there an easier way to fix this - I am not having any luck finding this using the shell.

I think I am going to just install Sierra - struggling with the command line in the hermit shell.

No APFS for me.

Thanks
