macOS High Sierra 10.13.5 (17F77) ist veröffentlicht

Beitrag von „Politic“ vom 15. Juni 2018, 19:54

Classic installation from Apple Update to version 10.13.5 - absolutely no problems from version 10.13.4.

I have installed Update 10.13.6 from today and have problems with graphics. The text was blurred. So I returned version 10.13.5.

The Intel HD530 graphics card will be a problem in version 10.14. Installation stopped with Error message ... 🙄
