Erledigt   **Größere Festplatte eingebaut, wie APFS Container erweitern?**

Beitrag von „Thogg Niatiz" vom 16. Juni 2018, 17:47

Dann lass es entweder so oder verwende diskutil:

```
Usage:  diskutil apfs convert <disk> [-dryrun]
        where <disk> = MountPoint|DiskIdentifier|DeviceNode
Non-destructively convert an HFS volume to an APFS Container with a single
APFS Volume. You can then add/delete/etc to that Container as usual. The HFS
volume can be located on a partition or a CoreStorage logical volume (LV), in
which case the CoreStorage logical volume group (LVG) is dismantled.
Ownership of any affected disks is required.
Example:  diskutil apfs convert disk0s2
          diskutil apfs convert disk5
```
