

Erledigt

[English] I need some help with Mojave and Z77X-UD5H and Ozmosis. This is the best place, but I don't speak German. Can anyone help?

Hi there and welcome back... 😊

The main issue at hand seems to be the settings the defaults.plist from Ozmosis.

There are a couple of major changes which have to be added in the file.

If you have your EFI-based defaults.plist just add it via "advanced reply"->"File attachment" and I'll check out the necessary changes.

BTW:

I never heard of an Apple installer wiping the EFI-Partition... only if you had deliberately reformat your hard drive... 😊
