macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „nikoZ“ vom 26. Juni 2018, 22:13

Updated kernexpatcher.ffs with your version and applied also 10.13.6 PMHeartUSB patch for high sierra and it's all good. After setting up to boot from HS startup disk it first boots with invalid kexts and after restart it goes on and no SMC provider error it's shown.

Now it is all good. Thanks.

We will need a new USB patch but that will be on final release. Webdriver needed also.
