macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „nikoZ“ vom 27. Juni 2018, 00:31

Just first time i set mojave to boot, then it works normal.

No need for USBInjectAll if you disable legacyUSBSupport and EHCI handoff. That way you'll have every port routed to 3.0 chipset controller only. It is needed only USBPort limit patch that im talking about.
