

## **Erledigt** asus gl553vd

**Beitrag von „adra“ vom 1. August 2018, 23:57**

I have a similar laptop the GL753VD with the same hardware just a 17" screen size. I tried to boot High Sierra with your EFI folder and followed your steps and I have trouble booting MacOS after installing it. It seems to be too many kexts being loaded. What is your current config.plist that you are using at the moment. Im booting in UEFI mode with GPT partitions. How can I help you guys troubleshoot this and hopefully get it running on my ASUS too.
