Glaube das war von ben9923 Antwort genug,

Zitat

You have a Synaptics trackpad. Like some ELANs, a different satellite kext will be necessary to have multitouch capabilities.

The Synaptics code wasn't successfully ported to v2 (See VoodooI2CSynaptics.kext).

If you have the knowledge, you can try doing it yourself.

You can also try the old v1.0.4, but it's less stable and efficient.
