

## Erledigt **asus gl553vd**

**Beitrag von „adra“ vom 8. August 2018, 19:13**

I'm trying to install High Sierra and cant get to the Install screen. Im using the latest clover released today (r4637), and High Sierra (10.13). I also updated my BIOS to the latest version from 304 to 307. It gets stuck half way on the apple logo screen. What [BIOS settings](#) you guys are using?

My current BIOS config is the following:

- Intel Virtualization Technology: Disabled
- Intel AES-NI: Disabled
- VT-d: Disabled
- Fast boot: Disabled
- CSM Support: Disabled
- Secure Boot: Disabled
- Legacy USB support: Disabled
- USB Mass Storage Driver Support: Enabled

Should **Intel Virtualization Technology** or **CSM Support** be enabled?

Sorry for not writing in German and thanks for any help you can provide.
