## **[gelöst] Acer Spin 5: Finetuning !**

**Beitrag von „MrVanosh“ vom 9. August 2018, 22:53**

I can't open ioreg it's corrupted. Make sure you use version 2.1 and click File -> Save a copy as (option + command + S)

Edit I opened it with version 3. Seriously your touchpad is not working? You can't move it when u login? In ioreg it looks very good, voodooi2c attaches full to touchpad. May check with my version, I recommend it because it have better gestures which can be set in system preferences and works with Mojave(original version cause kernel panic). Check without appleps2smarttouchpad.
