

Mod BIOS via Programmer flashen

Beitrag von „jboeren“ vom 10. August 2018, 10:54

Welchen chip wird vom Programmer erkannt?

Zitat: "Yes x240 has only one 16MB chip. 25Q128FVSSIQ. FPT recognizes it as 25Q128BV though. That's because both chips share the same hardware id. And FV and Q appears to be the newer version with quad speed bit turned on."
