Skylake Sammelthread (Hilfe und Diskussionen)

Beitrag von „al6042“ vom 11. August 2018, 12:53

Hi [@Politic](#)

since this is not a complete Install manual I added it to this collective thread.

But why are you using AppleALC in your EFI and also install VoodooHDA?
That does make no sense, since the ALC892 from your board should work flawlessly with the AppleALC, if the settings in your config.plist are correct or using a patched DSDT.aml.
