macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „kuckkuck“ vom 14. August 2018, 17:59

Have you tried to boot from an USB-Install Thumb-Drive with Mojave on it to validate that the ROM is working?

As i told you my disk is M2 SSD and i think it is the problem.

Yes, that can be a problem, is it NVME? How does your setup using Clover look like to get the M.2 working? Do you use NvmExpressDXE-64.efi or Kext2Patch entries?
