macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „nrchandar0100“ vom 15. August 2018, 17:24

Hi,

I have already switched off integrated graphics. One thing i want to share is just now i installed high sierra on a normal HDD and installed the Ozmosis boot loader given by you and restarted the machine. Before restarting i altered the bios setting for Ozmosis including the native graphics disabled. When i booted the ozmosis works i found it by pressing and holding option key which will show all the disks. The apple logo is also seen and as soon as progress bar ends the display go blank nothing on the screen but i can see the system is working as the indicator lights are blinking. My opinion is the nvidia graphics in ozmosisDefaults has to be set as disable nvidia graphics from TRUE to FALSE. Am i correct. Please tell me and if possible alter the OzmosisDefaults plist to enable nvidia graphics and send me new 167X-XMAS.

It is of great help please

Thanks and Regard
