## macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „ShadIK02“ vom 17. August 2018, 23:49

[@kuckkuck](#),

I osmosis also really like it, I want it to develop, mistakes were corrected, unfortunately I'm not a coder (((

With osmosis I have to use only 2 kexts (!!!) FakeSMS & Realtek RTL8111 <- it's VERY VERY good, I do not need any drivers, everything works except one - IQSV in Mojave 😄

And i have one question:

I'm not using the AcpiPatcher, how can i refuse KernextPatcher?

Previously, it was not use it, please explain his principe of his work)
