

Clover Bootloader aktuelle und ältere Versionen

Beitrag von „al6042“ vom 25. August 2018, 17:46

Und weiter geht es mit der Version 4658 und folgenden Neuerungen:

Zu dem erwähnten AppleSupportPkg gehören die beiden EFI-Treiber

- AppleImageLoader > Secure AppleEfiFat binary driver with implementation of AppleLoadImage protocol with EfiBinary signature verification. It provides secure loading of Apple EFI binary files into memory by pre-authenticating its signature.
- AppleUiSupport > Driver which implements set of protocol for support EfiLoginUi which used for FileVault as login window. In short, it implements FileVault support and replaces *AppleKeyMapAggregator.efi*, *AppleEvent.efi*, *AppleUiTheme.efi*, *FirmwareVolume.efi*, *AppleImageCodec.efi*. Also, it contains hash service fixes and unicode collation for some boards. These fixes removed from AptioMemoryFix in R23.

Damit werden einige .efi-Treiber für FileVault-Nutzer reduziert.
