What did you do to fix the 59178086 Device ID? I've been fighting this issue with a dell 7370 with i7 8550u and uhd620 for over a month lol. I can not accept the life of a 59168086 devices ID. It locks at IOScreenLockState or Kernel panics. I can boot without QE / CI 7mb all day. But that does not work to well. Could you please let me know what you all did to fix this?
