Erledigt Sierra auf einem Lenovo E460

Beitrag von „ramzha" vom 10. September 2018, 13:48

No sir, Im just newbie here and not quite sure that I could run perfect mac os on this laptop. But if the Wifi card the only thing which interrupts using this device, I would buy that extention. How about other devices? Does touchpad work and copatible with gestures?
The last question is can anyone drop here actual efi folder/ the most copatible kexts/DSDT file. Yesterday I successfully installed the os, but I couldnt actually run it properly even if clover bootloader is installed.

Offtop: The bios of laptop cant see bootable usb at first try, so i have to reboot is several times to make the bios detect my flash card. Did anyone found solution, or its just a flash drive issue? Thatnks in advance!
