How to enable QE/CI

Beitrag von „uVSthem“ vom 16. September 2018, 18:01

I have a G1.Sniper Z97 with Ozmosis installed on it running High Sierra. What is the best method of getting QE/CI enabled? My video card is a 1080 ti but I also have a 750 ti installed in my system because I use it in Windows for PhysX. OSX is detecting both cards correctly and I have the latest Nvidia drivers and CUDA software installed.
