Sierra auf einem Lenovo E460

Beitrag von „ramzha“ vom 16. September 2018, 18:28

Okay, I made my sound and mic work via vanilla AppleHDA patching. Still better than the VoodooHDA quality. Last but not the least: sleep mode, works not like S3 (suspend to ram), my red light indicator shows that its active, and my fan is spinning. Could you tell how did you solve it? Or it is just the way it should work? Tried your VoodooPS2controller, still no Multitouch... And how did you get camera to work?
