[gelöst] Acer Spin 5: Finetuning !

Beitrag von „MrVanosh“ vom 20. September 2018, 16:46

[@iPhoneTruth](#) oh I have same issue on previous version in High Sierra. Now on Mojave it works with only sleep issue. But I have solution, need to change one line in source code. I will post this new Voodoo with Mojave and corrupted the registry patch and then we will have functional touchscreen without UPDD Driver and working sleep 😁

Edit: Uploaded, I not guarantee touchscreen will work on High Sierra, Mojave changes something in HID Driver so it works also OOTB but with no gestures etc.
