## DarBoot - APFS Booteinträge mit Ozmosis

Beitrag von „cecekpawon“ vom 25. September 2018, 05:17

[@longhui](#)

You meant BootOrder?

DarBoot will change your BootOrder value ONLY while:

- Adding new entry (if new founded path currently doesn't exists on your boot entries).
- Deleting existing entry (if one or more scanned entries doesn't have valid FilePath with 'DeleteInvalidPath' option set to <true/>).

OR, will leave it as is if doesn't meet those situations.
