## ESI Juli@ PCI Soundkarte

**Beitrag von „Battleman12“ vom 27. September 2018, 00:14**

hey Vadim, that work well fine. thank you a lot. now just one problem. I got sound out of my cinch outputs But not out of my spdif output. Do you know how to handle this? when I´m in the audio midi setup there is point where I could switch between these outputs, but it don't save the changes and it automatically switches back to the analogue outputs.

Thank you very much for your help.

Hope to get it fix soon
