

# Erledigt Mojave installation

Beitrag von „Leo Duke“ vom 27. September 2018, 03:50

... hmm, immer noch Beta 😞

The screenshot displays the 'About This Mac' window for an iMac. On the left is a small image of the iMac. The main area contains the following information:

- Model Name:** iMac
- Model Type:** iMac18,2 (21.5-inch, 2017)
- Model Identifier:** iMac18,2
- Board Identifier:** Mac-77F17D7DA8288301
- Processor Name:** Intel Core i7 CPU 6700K
- Processor Model:** Kaby Lake
- Processor Speed:** 3,6 GHz
- Number of Processors:** 1
- Total Number of Cores:** 4
- Memory Size:** 16 GB 2400 MHz DDR4
- Graphics Model:** Radeon RX 560 4096 MB
- Intel HD Graphics:** 530 1536 MB
- Assembled in:** China
- Manufactured during:** June 2017
- Serial Number:** C 5

Below this, there are several rows of technical specifications:

- L1 Cache:** 64 KB
- L2 Cache:** 256 KB (per Core)
- L3 Cache:** 8 MB
- Processor Bitrate:** 64 bit
- EFI Bitrate:** 64 bit
- Kernel Bitrate:** 64 bit
- Direct Media Interface:** 8.0 DT's
- Boot ROM Version:** IM183.0161.800
- System SMC Version:** 2.43FD

Further down, it shows:

- Power Source:** AC Power
- Hardware Universal Unique Identifier:** 50 38

At the bottom, there are three lines of operating system information:

- Minimum Supported Operating System:** macOS 10.12.5 Build 16F2073 (Sierra)
- Current Boot Operating System:** macOS 10.14.0 Build 18A331 (Developer/Public Beta)
- Maximum Supported Operating System:** Latest version of macOS 10.13 (High Sierra)

A blue arrow points to the 'Current Boot Operating System' line.

Außer wake funzt alles 👍
