macOS Mojave 10.14 Lauffähige Systeme (EFI-Sammelthread)

Beitrag von „locojens“ vom 28. September 2018, 20:46

iMac 18.3

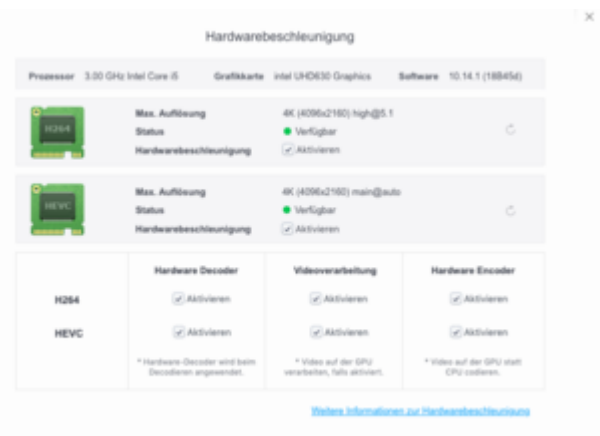

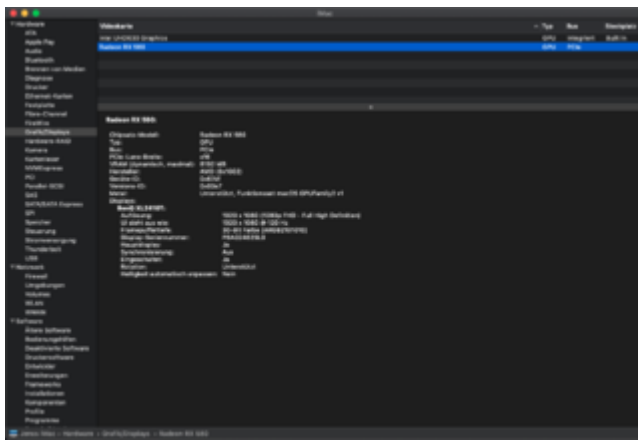

GA Z370 HD3P (UEFI F8) | Core i5 8500 | 16GB RAM | Radeon RX580 8GB | Samsung 860EVO 256GB SATA | BCM943602CS "Flughafen Computer" | mac OS 10.14.1 | Klee aktuell

Läuft alles zuverlässig Grafik, Sound, AHCI, Sleep und aufwachen von selbigen funktioniert.

Seriennummern wurden für die hochgeladene EFI geändert...

The image contains several screenshots from a macOS Mojave 10.14.1 Beta (18B45d) system. The top-left screenshot shows the 'About' window for an iMac (Retina 5K, 27-inch, 2017) with a processor of 3 GHz, 16 GB RAM, and a Radeon RX 580 8192 MB graphics card. The top-right screenshot shows the 'Hardware' menu with 'Audio' selected, displaying a list of audio devices including integrated, line, and digital outputs. The middle-left screenshot shows the 'Hardware' menu with 'USB-Gerätebaum' selected, displaying a tree view of USB devices including USB 3.0 Bus, USB 2.0 Hub, and USB 3.1 Bus. The middle-right screenshot shows the 'System Report' window with the 'Hardware' tab selected, displaying a detailed list of hardware components including the processor, memory, graphics, and various controllers. The bottom-left screenshot shows the 'DPCManager' application interface, displaying a list of hardware components and their status. The bottom-right screenshot shows the 'System Report' window with the 'Hardware' tab selected, displaying a detailed list of hardware components including the processor, memory, graphics, and various controllers.
